Our customers say

“Just wanted to say that I have had Steve from Beaver Pest Control and he was fabulous. He was punctual, knowledgeable and had a sense of humour”

Jane, Legal Services Manager

“Just wanted to thank you and your engineer for such professional work - Your engineer was not only extremely competent and fast at executing his work but both your caring and understanding of difficult timing are not only appreciated but is a wonderful advertising for Beaver Pest which I will not hesitate to recommend.”

Josyanne A.

“I reported the problem at 9.30am and the visit was arranged the same morning. It is so rare to experience this level of customer service these days. I really appreciate it. Very well done! “

Michael G, Property Management.

“very professional technician”

Mr W.

Kill-@alert - Remote notification system

Kill-@lert is a highly efficient, humane rodent control system which uses radio frequency to send data from electronic rodent traps to the technicians mobile device.

- Using this cost effective and humane system means we can remotely monitor your site for activity thus reducing costs.
- High voltage shocks kill rodents quickly if they activate a trap. The system uses no chemical or poisons.
- A full reporting system is made available at regular meetings.

Do you think you have rodents ?

Mice and rats are common pests in offices, attracted by food and warmth. Having a pro-active pest control contract shows due diligence and protects the health and well-being of your staff and any visitors.

Mice produce around eighty droppings in a day and urinate wherever they run so they can soon contaminate a large area. Like rats they have teeth that continually grow. The constant gnawing to wear these down in size, results in fire risk and can cause significant damage to buildings.

Rats and mice are known to spread diseases and cause food poisoning. Mice tend to come out when it is quiet resulting in them being more active at night. They live for around 12 months, are pregnant for only 3 weeks and a single pair can be responsible for producing hundreds of mice within one year.

If you believe you have a problem contact us for expert advice and a no obligation survey. Signs only become obvious once an infestation has taken hold.

Our innovations

⇒ It starts with the survey.

Our surveyors all started life as technicians so they understand pest control. They will carry out a thorough survey which means you can trust us to identify all the risk areas. Because of this we never quote over the phone. The survey will identify types of pests and their entry routes. You will receive a survey report which includes photographs. After the treatment is carried out we can help you block access routes.

⇒ Effective service carried out by motivated, dedicated technicians.

Because we treat our employees well, they treat you well. We are the only medium sized pest control company to check each technician on a regular basis and pay quarterly bonuses based on quality.

Provided as standard

- ⇒ Royal Society of Public Health accredited and trained technicians.
- ⇒ DBS-checked technicians.
- ⇒ Recommendations on the most cost effective way to manage your pest prevention long term, whether it is a one off job or a proactive comprehensive pest monitoring contract for multiple problems.

Pro-active contracts

- ⇒ Identification of the source of the problem.
- ⇒ Proofing recommendations every visit.
- ⇒ Hygiene recommendations every visit.
- ⇒ Information on how to reduce re-occurrences.
- ⇒ A fully compliant report book.
- ⇒ Appropriate treatment if there are pest problems.

Innovative ways to protect your staff's health.

Baitsafe™ is an innovative new product which can be used with both non toxic and toxic baits to control rodent problems. This low risk solution can be used in wall voids, ceilings, flat roof areas and sub-floors.

The patented locking system prevents accidental exposure to rodenticides protecting employees, contractors and visitors. The Baitsafe™ unit sits flush with the surface and can also be painted to make it even more discreet. It can only be opened with a specific tool making it extremely safe for both the technician and the office environment.

Do your staff complain about being bitten ?

Quite often staff will complain about being bitten especially in summer months. To find out whether you have fleas, mites or cable bugs or some other form of biting insect requires an expert survey as the treatments differ considerably.

High levels of static electricity can cause insect mark bite marks on exposed skin. This phenomenon is known as 'cable bugs'. Fleas and biting insects can be brought in from outside into the office environment.

If you are unable to locate the source of the infestation contact us for help. One of our surveyors will carry out a thorough survey to identify where the problem is and advise on suitable treatment options.

Our history

Established in 1990, Beaver Pest Control LLP has expanded to become one of the largest specialist pest control companies in the UK. We cover a full range of pests including two specialist teams to deal with bird and fox problems.

With 25 technicians covering London and the South on a daily basis we are always ready to respond to you.

Innovation is important for us, as using innovative methods helps us combat growing problems of resistance and tolerance.

We have a focus on education and preventative programs to help our customers. We believe prevention is as important as cure for long term pest prevention.

If you already have a problem, we can help you eradicate it, and then give you advice on preventing a re-occurrence.

To keep our service levels high we have implemented performance related pay which ensures our technicians clear your problem efficiently. This means you pay competitive prices for great work.

**Working with you to keep your
staff healthy & happy.**
